- 9:00 Conclusion of the Official Club Meeting.

Don't forget the Monday before the  
Wednesday meeting at Talbott's - 8:00p.m.  
463 California Ave. for those who have  
suggestions and comments.

THE EDITOR'S CORNER

To start this New Year of 1984, we want to thank those people who contributed so much time, energy, and effort to making this club work in 1983. THANKS TO -- Linda, Wes, Kevin, Mike and other members who made contributions of their time.

Nov. 30, 1983, we had an "election".

Treasurer: Bev. Altman 329-8252  
Speaker's Bureau: Mike Van Wass 325-2507  
Soft Copy Librarian: Jim Caldwell 692-7181  
Bulk Purchasing: Cathy Carroll 325-0824  
Membership: Linda De Sosa 856-6281  
Bulleting Board: Glen Ingram 323-1669  
Newsletter: Jackie Carr 858-1641  
Periodical Review: Kevin Olsen 494-2574

Membership fee - \$25.00 (includes a club library listing diskette which you can sign out and return)  
Copies of back newsletters are included.

Club Bulletin Board: 324-9119 (6 P.M. to Midnight & wkends)

FREE subscription to Softalk magazine for the IBM PC  
Send in your serial number to: Softalk IBM, Box 60,  
North Hollywood, CA 91603

IBM National Service Center 800-428-2569

NEWSLETTER deadline for submitting articles, comments, or information is 10 days before each meeting.

---

(Ad) DO YOU WANT TO BE YOUR OWN BOSS?

Freedom Won is a company that has created a new approach to marketing computers and software. We want individuals who use computers to create a personal approach, work with individuals and help reduce fears of this new technology.

Let me start by eliminating some of your fears! First - you don't need any capital. We maintain an inventory and a showroom (for those who need it) and take care of licenses and fees. You also are not restricted to set hours. You form your own business, so you are the boss. Best of all you don't have to be a computer wiz kid. We provide people who will answer your technical questions and give demonstrations for you if you want. We will even help you learn more so that you will be able to better serve the needs of your clients.

Freedom Won is a multimillion dollar, multilevel sales organization that sells all the popular brands of computers, software, and peripherals. Each representative forms his or her own company. If you are interested or just want to ask a quick question call: Ralph Marx 387-2238 (leave a message). Or come see us at OPPORTUNITY 84 at the Santa Clara Fairgrounds January 28th. (Call me for free tickets.)

Well, it's been awhile since I've clicked the keys to this newsletter, but here goes again. Probably the biggest news, with respect to changes in magazines, is that PC World has gone bi-weekly, or is that semi-monthly? At any rate, now they get the chance to misnumber pages two times per month. I haven't seen their new format yet, but no news is good news. However, their Dec 83 issue was over 770 pages. It also contains the index for 1983, which may make it a worthwhile purchase. There is also an article on PC furniture; but rumor has it that microwave oven carts work just as well for much less money. There is an introduction to assembly language on page 543, a comparison of spelling checkers on page 419 (included is Word Proof from IBM, 125K word dictionary for \$60. Not bad....), and the usual human interest stories about people who work at home, architects who design and lawyers who advocate with computers. Also, a slightly fluffy review of the Tallgrass 70meg Hard Disk, and articles on LISP and a property manager. Messing up this month's order of pages is about 50 pages of only-slightly reworked IBM press releases about the PCjr. No mention in the Table of Contents, but that's par. The PCjr review isn't numbered in any way, but begins about page 170. Since it has been decided, by the executives and honchoes of SPAC IBMPC that keeping up with the full-size PC is enough trouble, you won't find another word about junior, at least in this space.

In the December Byte, look on page 36 for relatively simple fixes and complex explanations to the problems of power-line pollution (lightning and such).

In the January Byte, page 442 contains an article on real-time clocks and DOS 2.0. Reasonably technical....

To be let down so early in the new year...my favorite of the big magazines -- PC World -- except a special report on the IBM PC's little brother, you know, the one I said I wouldn't mention any more. Also, article on Think Tank, an "idea organizer", and a guide through a short assembly language program to "date" your programs. Finally, a tough view of FORTRAN compilers available for the PC starts on page 172.

The Dec 83 issue of Softalk, which most of you should be getting for free, talks about the XT/370 and the 3270PC on pg 77. But in the January issue, there is an article on undocumented Basic commands, a C programming language tutorial, a listing for the program "whereis.com" to help you find where a file is (only affects 2.0 users with subdirectories), a rational look at acquiring a hard disk (much better than PC's Tall Tree article), and a program listing for getting a directory listing while in Basic. You know, like when you're in the middle of PC-Talk and want to know the exact name of the file you're about to send, but you can't remember so you get out of PC-Talk to get back to the A> to do a DIR, and your Hayes hangs up on you....when you finish typing in the listing, and it works, please give it to Jim Caldwell, such that it can go into the club library. All for now, kids.....

# The Stanford/Palo Alto Users Group for the IBM PC

Box 3739 Stanford, CA 94305

The IBM PC is a very good computer. It is very reliable and it is very easy to use. It is also very fast and it is very quiet. It is a very good computer and it is very easy to use. It is also very fast and it is very quiet. It is a very good computer and it is very easy to use. It is also very fast and it is very quiet.
